Contents

	Preface		*page* xi
1	**Quantum measurement theory**		1
	1.1	Classical measurement theory	1
	1.2	Quantum measurement theory	8
	1.3	Representing outcomes as operators	27
	1.4	Most general formulation of quantum measurements	32
	1.5	Measuring a single photon	42
	1.6	Further reading	49
2	**Quantum parameter estimation**		51
	2.1	Quantum limits to parameter estimation	51
	2.2	Optimality using Fisher information	54
	2.3	Examples of BC-optimal parameter estimation	62
	2.4	Interferometry – other optimality conditions	68
	2.5	Interferometry – adaptive parameter estimation	76
	2.6	Experimental results for adaptive phase estimation	83
	2.7	Quantum state discrimination	85
	2.8	Further reading	94
3	**Open quantum systems**		97
	3.1	Introduction	97
	3.2	The Born–Markov master equation	99
	3.3	The radiative-damping master equation	102
	3.4	Irreversibility without the rotating-wave approximation	109
	3.5	Fermionic reservoirs	113
	3.6	The Lindblad form and positivity	119
	3.7	Decoherence and the pointer basis	121
	3.8	Preferred ensembles	124
	3.9	Decoherence in a quantum optical system	130
	3.10	Other examples of decoherence	136

Published online by Cambridge University Press

3.11 Heisenberg-picture dynamics 141
3.12 Further reading 146
4 Quantum trajectories 148
4.1 Introduction 148
4.2 Quantum jumps 149
4.3 Photodetection 154
4.4 Homodyne detection 157
4.5 Heterodyne detection and beyond 166
4.6 Illustration on the Bloch sphere 172
4.7 Monitoring in the Heisenberg picture 181
4.8 Imperfect detection 190
4.9 Continuous measurement in mesoscopic electronics 201
4.10 Further reading 215
5 Quantum feedback control 216
5.1 Introduction 216
5.2 Feedback with optical beams using linear optics 217
5.3 Feedback with optical beams using nonlinear optics 231
5.4 Feedback control of a monitored system 237
5.5 Homodyne-mediated feedback control 246
5.6 Markovian feedback in a linear system 251
5.7 Deterministic spin-squeezing 259
5.8 Further reading 265
6 State-based quantum feedback control 269
6.1 Introduction 269
6.2 Freezing a conditional state 270
6.3 General classical systems 278
6.4 Linear classical systems 283
6.5 General quantum systems 308
6.6 Linear quantum systems 312
6.7 Further reading 337
7 Applications to quantum information processing 341
7.1 Introduction 341
7.2 Quantum teleportation of a qubit 343
7.3 Quantum teleportation for continuous variables 347
7.4 Errors and error correction 353
7.5 Feedback to correct continuously detected errors 362
7.6 QEC using continuous feedback 368
7.7 Continuous QEC without measurement 375
7.8 Linear optical quantum computation 379

Published online by Cambridge University Press

7.9 Adaptive phase measurement and single-rail LOQC 390
7.10 Further reading 395
Appendix A: Quantum mechanics and phase-space 398
A.1 Fundamentals of quantum mechanics 398
A.2 Multipartite systems and entanglement 404
A.3 Position and momentum 407
A.4 The harmonic oscillator 410
A.5 Quasiprobability distributions 414
Appendix B: Stochastic differential equations 418
B.1 Gaussian white noise 418
B.2 Itô stochastic differential calculus 420
B.3 The Itô–Stratonovich relation 422
B.4 Solutions to SDEs 423
B.5 The connection to the Fokker–Planck equation 424
B.6 More general noise 425
