Compositin of the system

	Hamiltonian in the collision model	Contribution to the Lindblad equation
laser driving	$\frac{\delta}{2} J_z + \omega J_x$	$-i \left[\frac{\delta}{2} J_z + \omega J_x, \rho \right]_-$
collective spontaneous emission	$\sqrt{\frac{\kappa}{\Delta t\, N}} \left(J_+ a + J_- a^\dagger \right)$	$\frac{\kappa}{N} \mathcal{D}[J_-](\rho)$
collective dephasing	$\sqrt{\frac{\gamma}{\Delta t}} \left(b + b^\dagger \right) J_z$	$\gamma \mathcal{D}[J_z](\rho)$
local pumping	$\sqrt{\frac{\Gamma}{4\Delta t}} \left(J_+ c_- + J_- c_+ \right)$	$\frac{\Gamma}{4} \sum_{i=1}^{N} \mathcal{D}[\sigma_i^+](\rho)$
