

Composition of the system

			Hamiltonian in the collision model	Contribution to the Lindblad equation
laser driving			$\frac{\delta}{2} J_z + \omega J_x$	$-i \left[\frac{\delta}{2} J_z + \omega J_x, \rho \right]_-$
collective spontaneous emission			$\sqrt{\frac{\kappa}{\Delta t N}} (J_+ a + J_- a^\dagger)$	$\frac{\kappa}{N} \mathcal{D}[J_-](\rho)$
collective dephasing			$\sqrt{\frac{\gamma}{\Delta t}} (b + b^\dagger) J_z$	$\gamma \mathcal{D}[J_z](\rho)$
local pumping			$\sqrt{\frac{\Gamma}{4\Delta t}} (J_+ c_- + J_- c_+)$	$\frac{\Gamma}{4} \sum_{i=1}^N \mathcal{D}[\sigma_i^+](\rho)$
